

Patients with a lower extremity prosthetic need expert attention and support. At **POSI** we can provide the highest level of expertise to help your patient reach their goals.

### **Prosthetic-Related Rehabilitation Issues:**

If a patient is having problems progressing in their rehabilitation, the issue may be an improper fit of their prosthesis. Our board-certified prosthetists are recognized by physical therapists as having extensive experience in diagnosing prosthetic socket related problems. We are happy to meet with your patients to perform a fitting assessment and adjustment if needed.

### **Activity Level Advancements:**

When your patients are ready to move onto higher levels of function and want to pursue more advanced athletic activities, our team can help. We offer needs evaluation and will work with insurance companies to help procure the proper prostheses. We then follow through with the fitting and advanced amputee specific training.

### **On-site Observation and Evaluation:**

Our practitioners will come to your rehabilitation facility to observe patients and help diagnose prosthetic related issues.

### **Our Prosthetists can help.**

### **Symptoms of Poor Fitting (Ill fitting) Socket:**

- Unable to progress to expected goals
- Pain
- Increased energy expenditure, effort & concentration to walk
