

When you have patients with a prosthetic limb and find they are having complications with their rehabilitation process as a result of the prosthesis, we can help. Our experienced prosthetists can provide expert assistance with fitting problems that affect patients' rehabilitation advancement.

Our Prosthetists can help.

Prosthetic-Related Rehabilitation Issues

For patients with prosthetic related rehabilitation issues (such as improper fit) we can provide fitting assessments and adjustments to the prosthesis. We can assist your patient in getting a new prosthesis if necessary and we are experienced at getting things done right the first time.

Activity Level Advancements

When your patients are ready to move to a higher level of function and want to pursue more advanced athletic activities, our team can provide expert services including needs evaluations, acquiring and fitting prostheses and offering amputee-specific training.

On-Site Observation and Evaluation

Patients who have difficulty rehabilitating may need our expertise to observe and help diagnose prosthetic-related issues. Often a simple prosthetic adjustment can overcome obstacles.

POSI will:

- Promptly begin the evaluation process
- Gather information about the patient's areas of concern
- Establish specific goals to meet your patients' needs
- Implement a customized plan to successfully meet those goals
- Provide prompt, accurate and frequent reports on your patients' progress.

At **POSI**, our board-certified prosthetists have extensive experience diagnosing prosthetic socket-related problems and can evaluate patients who may be candidates for the most state of the art prosthetic components. We offer several assistive programs to help your patients overcome issues. It may be something as simple as a fitting problem to situations as advanced as needing a new, high-performance prosthesis.

POSI offers your patients:

- A rehabilitation process that is as smooth as possible
- A welcoming environment which ensures privacy, comfort and understanding
- Care that is provided with dignity and compassion, targeted at helping your patient feel self-confident
- Specialized individual care
- Most insurances accepted

Getting the right care for your patient is easy. Refer your patients to us to evaluate and fit for a prosthesis.
