

POSI works with most insurance networks and will obtain any prior authorizations necessary. Our insurance specialist will navigate your plan to ensure you will receive the optimal prosthesis. If additional coverage is necessary, POSI will guide you to appropriate resources that can help fund your prosthesis.

Not a clinical service. The Free Screening does not create a health care provider-patient relationship. The Free Screening is not intended to be nor shall it be construed to be inducement for health care services.

Welcome to **Prosthetic Orthotic Solution International** (POSI). We are ready to be your partner to get you back to living a fulfilling, functional lifestyle.

Your clinical experience will reflect your needs and goals. Care begins with a participatory exchange of information with our practitioners to learn about your lifestyle, your goals and how we can work with you to achieve them.

At POSI, we bring you experience and dedication providing you with a prosthesis that gives you the highest degree of function while being aesthetically pleasing.

The foundation for all prosthetic designs is a properly fitting socket. Socket fit has an immense impact on success in rehabilitation.

Our in-house fabrication lab allows for progressive socket designs that lead to a superior fit.

Closely related to the socket design is suspension, how the socket remains in place. Suspension is unique to each individual.

A prosthesis should not be painful and should not hold you back from reaching your goals.

Jason

What you can expect from POSI:

- Outcome Based Practice
- Client Participation through every step of the process
- Team Approach to your Prosthetic Care
- Superior Socket Fit
- Expedited Services
- New Technology - Beta Test Site
